Leveraging eID in the Private Sector

INSIDE THIS NEWSLETTER

We are all looking forward to join you in the LEPS Final Workshop the 3rd of October 2018 in the University of Murcia

What is new in LEPS?

One month before the final workshop of the project, LEPS is now in its last phase of development. The customization of the postal and financial services from Greece and Spain have been integrated with the eIDAS infrastructure and the consortium is working together in order to obtain great results in the cross-border authentication automated tests.

In addition, the consortium has already developed a Mobile App which allows any Spanish citizen to access Greek services by using the Spanish DNIe to authenticate within eIDAS infrastructure. (Page 4)

We are all looking forward to the LEPS Final Workshop the 3rd of October 2018 in the University of Murcia. The LEPS final event is presenting a wide perspective that should lead to the recommendations and roadmap for the further adoption of eID in the private sector and in particular for the reuse of LEPS results, such as eIDAS adapters. The event will also analyse situation in different EU countries related to connecting e-services to eIDAS nodes, projects and pilot demonstration

EEMA Annual Conference

LEPS project has been presented at 31st EEMA Annual Conference that took place in London on June 13th and 14th. This year event was attended by more than 200 e-identity experts, policy-makers and senior managers from public, private and academic sector institutions from across Europe and beyond.

Aljosa Pasic presented LEPS project and used the opportunity to establish collaboration with several related initiatives. The post-presentation discussion was including the analysis of business models that involve private sector e-services with identification and authentication relying on government issued e-IDs, as well as postal sector strategies related to e-ID provision and usage.

New LinkedIn Page   Connect on Linked in

Recently and as a new channel to approach LEPS stakeholders, we decided to launch our Company Page on Linkedin due to the fact that it is the third most used platform among business owners.

We will use this channel to keep everyone informed about the project updates, blog posts and news related with the eID in Europe.

LEPS at the ARES Conference 2018

The European projects Clustering Workshop On Cybersecurity and Privacy (ECoSP 2018) was held in conjunction with the 13th International Conference on Availability, Reliability and Security on August 27-30 in Hamburg, Germany, where LEPS project was presented.

Several European projects were there such as Aries, Lightest, Anastacia, Credential, Cybeco, Yaksha, Sissden, SAINT, FORTIKA, FutureTrust, CIPSEC, etc

LEPS Blog

LEPS' blog audience is increasing potentially, generating a real dialogue with the scientific and general audience.
Today, the blog counts with several posts written by different partners of the consortium. Considering the professional backgrounds heterogeneity, each blog post is oriented for a different audience creating an attractive site for a wide range of public.

How can Service Providers connect to eIDAS Network with the minimum possible effort and cost? ›
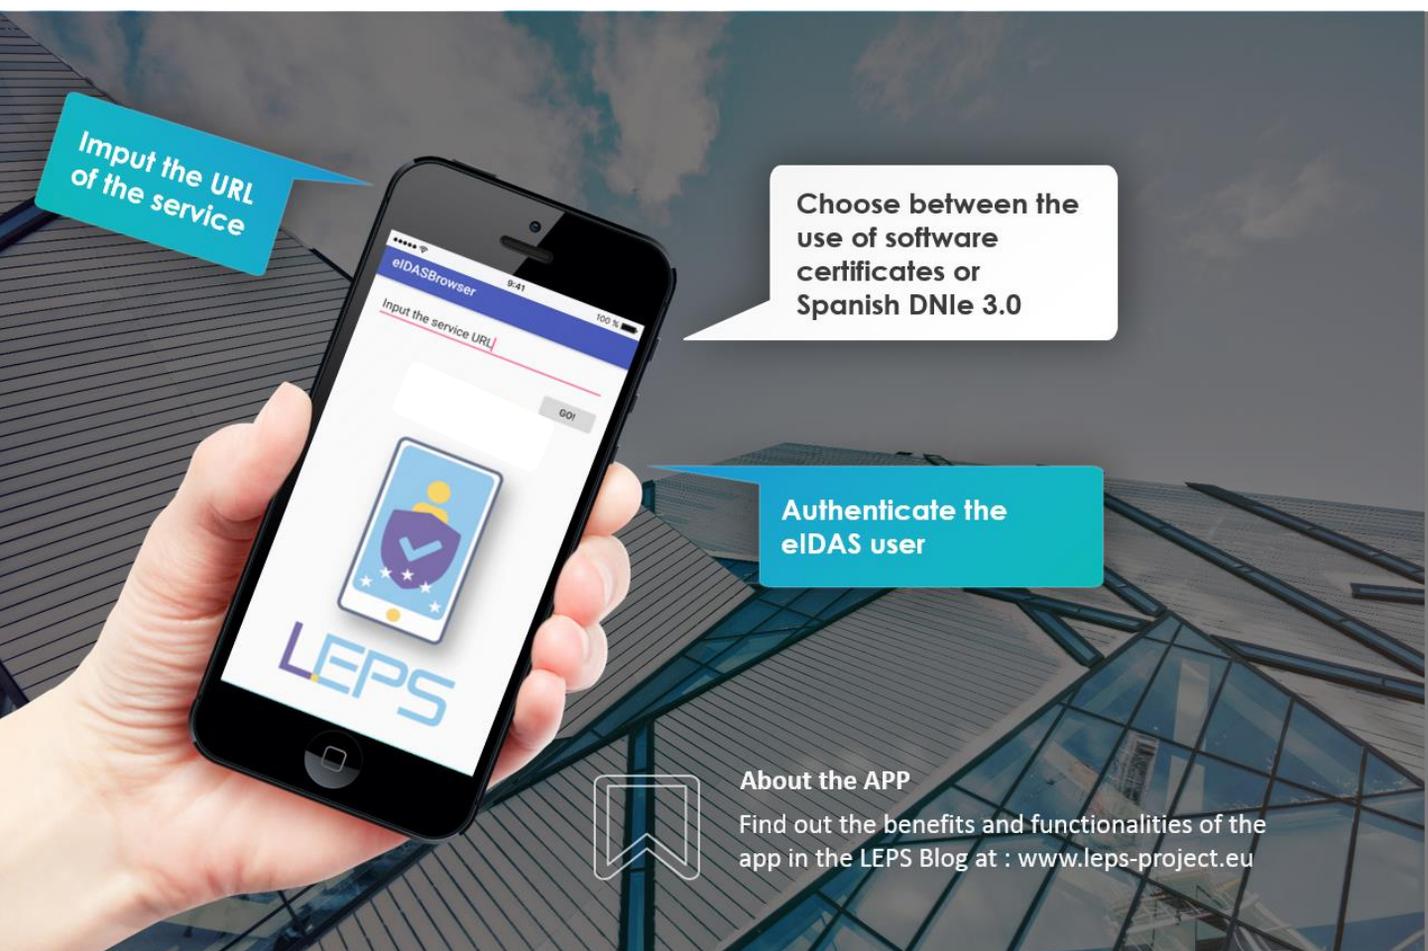

Mobile eID App

LEPS Consortium is developing a Mobile App which main objective is to offer mobile support for Greek Services to authenticate Spanish citizens, using the eIDAS infrastructure and the Spanish DNIe 3.0, when they access to Greek services. This Mobile ID app is part of the work done in the Activity 3.1. of the project led by University of Murcia (Spain), defined as Mobile Authentication, which will be outlined in the Deliverable 3.1. *"Mobile ID app and its integration to results with the Industrial Partners"*.

The document includes the process of analysis, design and implementation of a mobile solution that covers all the requirements and principles of the LEPS project, as well as a guide to the installation and use of the solution designed and the first results of the integration and testing process with the pilot services, both Greek and Spanish.

LEPS Mobile ID App

Integration with eIDAS nodes in Spain and Greece

During the last period several tasks have been performed in LEPS project in order to integrate different e-services with the eIDAS network trough national nodes in Spain and Greece. These activities include compilation of requirements from service providers, such as Spanish and Greek postal sector service providers (Correos and ELTA), as well as the actual customization and integration tasks. The main results achieved are **creation of an eIDAS adapter based on the integration package** provided by the Spanish eIDAS node operator, aimed at integrating e-services with the Spanish eIDAS node in a pre-production environment. Initially the results have been tested with Greek citizens accessing Spanish e-services, and later they will be tested with citizens from other EU countries. Results will be contrasted with those obtained from the LEPS tasks which develops eIDAS adapter for online services with the Greek eIDAS node, and which follows different integration approaches than the Spanish eIDAS adapter. This comparison of different architectural approaches, in terms of complexity, cost and reusability, will be valuable to the rest of EU member states and SPs in their investment decisions. It will allow different stakeholders to reduce time and effort for the integration with the eIDAS network, while adapting customization and integration efforts to their operational context and needs.

LEPS Final Event

On October 3rd 2018, the final LEPS workshop will take place in Murcia, at the premises of University of Murcia. LEPS project results will be presented, together with a number of other related and relevent presentations targeting uptake of eIDAS services in Europe. Registration is free and can be done by sending e-mail to one of the organizers
